

ABSTRACT OF THE INVENTION

According to one aspect of the present invention, a method is provided in which information about a medical procedure/test is received. The information about the medical procedure/test may include one or more codes or descriptions relevant to the patient and procedure/test that are used to process, identify or classify the medical procedure/test performed by a service provider. Upon receiving the information about the medical procedure/test, a query function is performed to retrieve from a database a list of data sources and/or support information that correspond to the information received. One or more documents are generated that contain the list of data sources and/or support information retrieved from the database.
